Research Experience

University of Michigan Sept. 2018 - Present
Research Assistant

- Currently designing and building novel social computing systems that are *consentful*—systems that protect people's interpersonal consent in interactions.
- Theorized how social platforms can be built to ensure online interactions are consensual based on affirmative consent ("yes means yes"). [c1]
- Built *Sig*, a Chrome extension that computes and renders synthesized social signals (S3s) on social platforms. S3s are social signals computationally derived from an account's history (e.g., behavior of posting toxic content), and then rendered on the profile. Conducted a field deployment study including surveys and interviews to evaluate Twitter users' experiences of using Sig. [c3]
- Built ML models to identify potential Russian trolls on Twitter, using an unbalanced dataset of 2.2K Russian troll accounts released by Twitter and 170K control accounts. [c2]

Sassafras Tech Collective May 2020 - Aug. 2020
Software Development & Research Intern, advised by Dr. Jill Dimond

- Conducted (remote) usability testing of a client's moderation system.
- Based on the usability testing results, designed mockups and further developed the moderation system.

Haystack Group, MIT Apr. 2017 - Apr. 2018
Undergraduate Research, advised by Dr. Amy X. Zhang and Dr. David Karger

- Investigated how various factors affect the outcome of Request for Comments (RfC), a deliberative discussion on Wikipedia, by using mixed methods: 1) interviewing Wikipedia editors and 2) creating and quantitatively analyzing an English RfC dataset. [c4]

MIT App Inventor, MIT Oct. 2016 - May 2017
Undergraduate Research, advised by Dr. Hal Abelson

- Enabled novice programmers to create modular code in the App Inventor, by developing customized blocks within the system that can execute any functions of an imported API.
- Implemented virtual reality (VR) blocks in the App Inventor to help novice users build VR apps. [c5]

Soft Active Materials Lab, MIT Sept. 2016 - Feb. 2017
Undergraduate Research, advised by Dr. Hyunwoo Yuk

- Developed 3D printing based soft robotic hands with stand-alone actuation and control system.
- Implemented the software interface for precise 3D printing for advanced soft materials.
