Research Experience

comp.social, University of Michigan

Sept. 2018 - Present

Research Assistant

- Currently investigating i) how interpersonal consent can be defined in the context of social platforms and ii) how social platforms can be designed with interpersonal consent at its core.
- Built *Sig*, a Chrome extension that computes and renders synthesized social signals (S3s) on social platforms. S3s are social signals computationally derived from an account's history, and then rendered onto the profile. Unlike conventional signals such as profile bios, S3s use computational summarization to reduce receiver costs of getting information from post history and raise the cost of faking signals (under submission at CHI 2020).
- Built ML models to identify potential Russian trolls on Twitter, using an unbalanced dataset of 2.2K Russian troll accounts released by Twitter and 170K control accounts.

Haystack Group, MIT

Undergraduate Research

Apr. 2017 - June 2017

(Remotely collaborated until April, 2018)

- Investigated how various factors affect the outcome of Request for Comments (RfC), a deliberative discussion on Wikipedia, by building machine learning models.
- Analyzed interviews with RfC participants to find ways to overcome tensions within the RfC system.

MIT App Inventor, MIT

Undergraduate Research

Oct. 2016 - May 2017

- Enabled novice programmers to create modular code in the App Inventor, by developing customized blocks within the system that can execute any functions of an imported API.
- Implemented virtual reality (VR) blocks in the App Inventor to help novice users build VR apps.

Soft Active Materials Lab, MIT

Undergraduate Research

Sept. 2016 - Feb. 2017

- Developed 3D printing based soft robotic hands with stand-alone actuation and control system.
- Implemented the software interface for precise 3D printing for advanced soft materials.
