Research Interests

Working in the fields of human-computer interaction (HCI), usable privacy, and human-centered AI, I design and build systems to address consent, privacy, and safety in AI and social media. In particular, I theorize about, develop, and evaluate consentful systems—computing systems that center people’s consent regarding their interactions and data. Consent is fundamentally about ensuring individuals—especially those who tend to be vulnerable—have meaningful agency to decide whether and how an interaction should occur. My work produces theoretical frameworks, deployable system designs, and empirical evidence for building consentful systems.
